

Sheet Metal

Sheet metal guards are created to offer all manufacturers of industrial plants a customised and well-designed solution that prevents the escape of high pressure liquids and processing waste from the segregated area.

The design of the cabins takes place in collaboration with the customer, and our technical department is able to recommend the most suitable solution and to create the design in three dimensions.

Example of application of a cabin with double front opening.

Example of application of a watertight containment protection for chips.

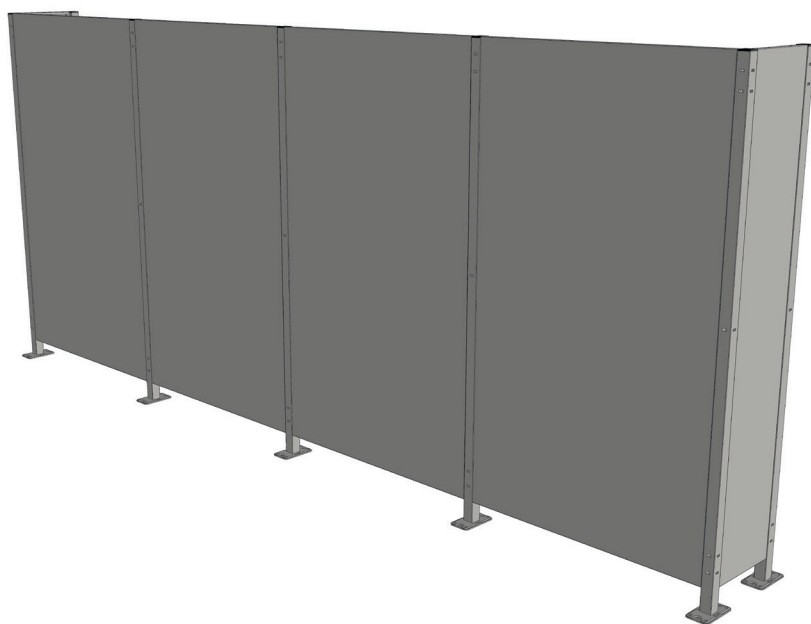

Sheet Metal Panels

The sheet metal guarding system was created to offer all manufacturers and users of machine tools and welding islands a steel solution with low costs, which is aesthetically pleasing, simple to install and robust.

Available in the standard or aesthetic version.
The panels can be equipped with portholes for inspection.
